## **1.0 INTRODUCTION**

The general features and principles of CSQF are developed based on international benchmarking, including the Malaysian Qualifications Framework for the purposes of alignment and recognition. The CSQF serves as an instrument to recognise learning obtained from formal as well as informal and non-formal sources, enabling the competencies of the workforce in the industry to be identified, developed, assessed and recognised for the purpose of mobility and employability. Vested under the Act of *Lembaga Pembangunan Industri Pembinaan Malaysia* 1994 (Act 520), the CSQF serves as an important point of reference for quality assurance and accreditation of technical and vocational education and training (TVET) in the construction industry for individuals, programmes and approved training providers to professionalise the industry so as to support the transformation of the country towards a high-income nation. (Source: Construction Skills Qualification Frameworks, CIDB 2020).
